Preliminaries	0-1
---------------------	-----

Part I Linear Algebra

Linear Algebra

1 Vectors, Matrices, and Systems of Linear Equations Jane Day	1-1
2 Linear Independence, Span, and Bases Mark Mills	2-1
3 Linear Transformations Francesco Barioli	3-1
4 Determinants and Eigenvalues Luz M. DeAlba	4-1
5 Inner Product Spaces, Orthogonal Projection, Least Squares, and Singular Value Decomposition Lixing Han and Michael Neumann	5-1
6 Canonical Forms Leslie Hogben	6-1
7 Other Canonical Forms Roger A. Horn and Vladimir V. Sergeichuk	7-1
8 Unitary Similarity, Normal Matrices, and Spectral Theory Helene Shapiro	8-1
9 Hermitian and Positive Definite Matrices Wayne Barrett	9-1
10 Nonnegative and Stochastic Matrices Uriel G. Rothblum	10-1

11	Partitioned Matrices Robert Reams	11-1
----	--	------

Topics in Linear Algebra

12	Schur Complements Roger A. Horn and Fuzhen Zhang	12-1
----	---	------

13	Quadratic, Bilinear, and Sesquilinear Forms Raphael Loewy	13-1
----	--	------

14	Multilinear Algebra J. A. Dias da Silva and Armando Machado	14-1
----	--	------

15	Tensors and Hypermatrices Lek-Heng Lim	15-1
----	---	------

16	Matrix Equalities and Inequalities Michael Tsatsomeros	16-1
----	---	------

17	Functions of Matrices Nicholas J. Higham	17-1
----	---	------

18	Matrix Polynomials Jörg Liesen and Christian Mehl	18-1
----	--	------

19	Matrix Equations Beatrice Meini	19-1
----	--	------

20	Invariant Subspaces G. W. Stewart	20-1
----	--	------

21	Matrix Perturbation Theory Ren-Cang Li	21-1
----	---	------

22	Special Types of Matrices Albrecht Böttcher and Ilya Spitkovsky	22-1
----	--	------

23	Pseudospectra Mark Embree	23-1
----	------------------------------------	------

24	Singular Values and Singular Value Inequalities Roy Mathias	24-1
----	--	------

25	Numerical Range Chi-Kwong Li	25-1
----	---------------------------------------	------

26	Matrix Stability and Inertia Daniel Hershkowitz	26-1
----	--	------

27	Generalized Inverses of Matrices Yimin Wei	27-1
----	---	------

28	Inverse Eigenvalue Problems Alberto Borobia	28-1
29	Totally Positive and Totally Nonnegative Matrices Shaun M. Fallat	29-1
30	Linear Preserver Problems Peter Šemrl	30-1
31	Matrices over Finite Fields J. D. Botha	31-1
32	Matrices over Integral Domains Shmuel Friedland	32-1
33	Similarity of Families of Matrices Shmuel Friedland	33-1
34	Representations of Quivers and Mixed Graphs Roger A. Horn and Vladimir V. Sergeichuk	34-1
35	Max-Plus Algebra Marianne Akian, Ravindra Bapat, and Stéphane Gaubert	35-1
36	Matrices Leaving a Cone Invariant Bit-Shun Tam and Hans Schneider	36-1
37	Spectral Sets Catalin Badea and Bernhard Beckermann	37-1

Part II Combinatorial Matrix Theory and Graphs

Combinatorial Matrix Theory

38	Combinatorial Matrix Theory Richard A. Brualdi	38-1
39	Matrices and Graphs Willem H. Haemers	39-1
40	Digraphs and Matrices Jeffrey L. Stuart	40-1
41	Bipartite Graphs and Matrices Bryan L. Shader	41-1
42	Sign Pattern Matrices Frank J. Hall and Zhongshan Li	42-1

Topics in Combinatorial Matrix Theory

43	Permanents Ian M. Wanless.....	43-1
44	D-Optimal Designs Michael G. Neubauer and William Watkins.....	44-1
45	Tournaments T. S. Michael.....	45-1
46	Minimum Rank, Maximum Nullity, and Zero Forcing Number of Graphs Shaun M. Fallat and Leslie Hogben.....	46-1
47	Spectral Graph Theory Steve Butler and Fan Chung.....	47-1
48	Algebraic Connectivity Steve Kirkland.....	48-1
49	Matrix Completion Problems Luz M. DeAlba, Leslie Hogben, and Amy Wangsness Wehe.....	49-1

Part III Numerical Methods

Numerical Methods for Linear Systems

50	Vector and Matrix Norms, Error Analysis, Efficiency, and Stability Ralph Byers and Biswa Nath Datta.....	50-1
51	Matrix Factorizations and Direct Solution of Linear Systems Christopher Beattie.....	51-1
52	Least Squares Solution of Linear Systems Per Christian Hansen and Hans Bruun Nielsen.....	52-1
53	Sparse Matrix Methods Esmond G. Ng.....	53-1
54	Iterative Solution Methods for Linear Systems Anne Greenbaum.....	54-1

Numerical Methods for Eigenvalues

55	Symmetric Matrix Eigenvalue Techniques Ivan Slapničar.....	55-1
56	Unsymmetric Matrix Eigenvalue Techniques David S. Watkins.....	56-1

57	The Implicitly Restarted Arnoldi Method D. C. Sorensen	57-1
58	Computation of the Singular Value Decomposition Alan Kaylor Cline and Inderjit S. Dhillon	58-1
59	Computing Eigenvalues and Singular Values to High Relative Accuracy Zlatko Drmač	59-1
60	Nonlinear Eigenvalue Problems Heinrich Voss	60-1

Topics in Numerical Linear Algebra

61	Fast Matrix Multiplication Dario A. Bini	61-1
62	Fast Algorithms for Structured Matrix Computations Michael Stewart	62-1
63	Structured Eigenvalue Problems — Structure-Preserving Algorithms, Structured Error Analysis Heike Faßbender	63-1
64	Large-Scale Matrix Computations Roland W. Freund	64-1

Part IV Linear Algebra in Other Disciplines

Applications to Physical and Biological Sciences

65	Linear Algebra and Mathematical Physics Lorenzo Sadun	65-1
66	Linear Algebra in Biomolecular Modeling Zhijun Wu	66-1
67	Linear Algebra in Mathematical Population Biology and Epidemiology Fred Brauer and Carlos Castillo-Chavez	67-1

Applications to Optimization

68	Linear Programming Leonid N. Vaserstein	68-1
69	Semidefinite Programming Henry Wolkowicz	69-1

Applications to Probability and Statistics

- 70 Random Vectors and Linear Statistical Models
Simo Puntanen and George P. H. Styan 70-1
- 71 Multivariate Statistical Analysis
Simo Puntanen, George A. F. Seber, and George P. H. Styan 71-1
- 72 Markov Chains
Beatrice Meini 72-1

Applications to Computer Science

- 73 Coding Theory
Joachim Rosenthal and Paul Weiner 73-1
- 74 Quantum Computation
Zijian Diao 74-1
- 75 Operator Quantum Error Correction
Chi-Kwong Li, Yiu-Tung Poon, and Nung-Sing Sze 75-1
- 76 Information Retrieval and Web Search
Amy Langville and Carl Meyer 76-1
- 77 Signal Processing
Michael Stewart 77-1

Applications to Analysis

- 78 Differential Equations and Stability
Volker Mehrmann and Tatjana Stykel 78-1
- 79 Dynamical Systems and Linear Algebra
Fritz Colonius and Wolfgang Kliemann 79-1
- 80 Control Theory
Peter Benner 80-1
- 81 Fourier Analysis
Kenneth Howell 81-1

Applications to Geometry

- 82 Geometry
Mark Hunacek 82-1
- 83 Some Applications of Matrices and Graphs in Euclidean Geometry
Miroslav Fiedler 83-1

Applications to Algebra

84	Matrix Groups Peter J. Cameron.....	84-1
85	Group Representations Randall R. Holmes and Tin-Yau Tam.....	85-1
86	Nonassociative Algebras Murray R. Bremner, Lucia I. Murakami and Ivan P. Shestakov.....	86-1
87	Lie Algebras Robert Wilson.....	87-1

Part V Computational Software

Interactive Software for Linear Algebra

88	MATLAB [®] Steven J. Leon.....	88-1
89	Linear Algebra in Maple [®] David J. Jeffrey and Robert M. Corless.....	89-1
90	<i>Mathematica</i> Heikki Ruskeepää.....	90-1
91	Sage Robert A. Beezer, Robert Bradshaw, Jason Grout, and William Stein.....	91-1

Packages of Subroutines for Linear Algebra

92	BLAS Jack Dongarra, Victor Eijkhout, and Julien Langou.....	92-1
93	LAPACK Zhaojun Bai, James Demmel, Jack Dongarra, Julien Langou, and Jenny Wang.....	93-1
94	Use of ARPACK and EIGS D. C. Sorensen.....	94-1
95	Summary of Software for Linear Algebra Freely Available on the Web Jack Dongarra, Victor Eijkhout, and Julien Langou.....	95-1
	Glossary.....	G-1
	Notation Index.....	N-1
	Index.....	I-1
